

Northern Iraq Study

by
Cambridge Carbonates Ltd.
Expertise in carbonate and evaporite systems

A report on the petroleum geology of Northern Iraq. Interpretations are based upon a detailed synthesis of public domain data (250 references).

Contains:

386pp,
50 palaeogeography maps,
18 play fairway maps,
22 original figures,
and 63 redrafted figures

The report provides an overview of the regional geology that will be useful for explorationists and in addition, comprehensively presents publically available data on fields and discoveries for purposes of field evaluation. Maps are georeferenced and can be incorporated into GIS systems.

Play maps updated 2008.
