

Northern Iraq Study

Burning gas seeps at Kirkuk, 1989. Courtesy of Robin Cleverly. Author is second from right

A report on the petroleum geology of Northern Iraq. Interpretation based upon detailed synthesis of rare and public domain data (250+ references).

Contains:

386pp,

50 palaeogeography maps,

18 play fairway maps,

22 original figures and

63 re-drafted figures.

The report provides an overview of the regional geology that is useful for explorationists.

Additionally, it comprehensively presents **publicly available and obscure data on fields and discoveries for purposes of evaluation.**

Maps are georeferenced for incorporation into **GIS systems.**

Play maps updated 2008
